

Sprint #2 - Requirement 12

Our meeting with Sebastian Thrun was very quick given that he only had 10 minutes to talk with us. During this time, we gave him an initial overview of what we hope to accomplish with our project. The biggest advice he had for us was to get an end-to-end system up and running as soon as possible. He told us that the number one problem that people have with similar projects is that they become distracted. He recommended starting very small but just getting something capable of initially running and then incrementing from there. In order to accomplish this, he advised us to begin by picking one sidewalk and implement the end-to-end system. He also talked a little bit about a self-driving golf cart project that he was involved with at Google, showing us some videos on those cars and explaining a little bit about the design process.
